On-site

Deployment and administration	We take care of hosting, securing and maintaining your work on Kendis in the cloud for you. That means you will not be needing a system administrator	You will be hosting Kendis on your chosen hardware or from cloud services from companies like AWS. With the Server you have more control over customization and administration. But you'll need to manage and support the activities that your server is responsible for such as users, tasks and the infrastructure. The server administrator of your organization has to manually upgrade your Kendis Server. They are responsible for maintaining and installing any updates regarding security and software. For making any updates, the server administrator would also need an active license or a software maintenance plan. You can use LDAP for integrating On Premises.
Upgrades	No need for manual updates as your Kendis Cloud will be updated regular ensuring that you always have the latest version.	
SSO and LDAP integration	Single sign-on with OKTA helps sync your Active directory. Security is of highest priority for us.	
Security	When hosting on the cloud, the aspects of security, reliability and privacy are all covered. We ensure that your data is safeguarded at all times. Kendis cloud hosting meets the very high standards of performance and reliability to match with our customers' high demands. Kendis hosts cloud data on AWS.	You are responsible for the security.
Hosting		You are responsible for hosting on your own servers.
Privacy	Maintaining the privacy of our customers is the top priority for us.	You are responsible for maintaining privacy.
Reliability	Our products are designed for high performance and availability and built on best-in-class core technologies like AWS, so your organization can scale confidently and securely.	You're responsible for maintaining reliability.
Compliance	We are SOC2, ISO 27001/27018, PCI DSS v3.2, SAQ A, certified.	You're responsible for maintaining compliance.

Pricing	Kendis cloud offers monthly or annual subscriptions. Pricing is done per-user.	On-Premises for Kendis is offered as perpetual licenses on an annual payment plan. Having a server license allows you to use the software and 12 months long maintenance.
Site Name URLs	Kendis provides its cloud subscribers with a secure, authenticated site name. You can choose this when you sign up for the first time on Kendis.	You can host with any domain you control.
Backups	Backups are generated daily and retained for 30 days to allow for point-in-time data restoration. You can also generate an offline backup of your Jira or Confluence Cloud site once every 48 hours. Atlassian maintains these backups on your behalf for 7 days.	You and your organization are responsible for maintaining backups.
Direct Access to the Database	You do not have direct access to your database structure, file system or the infrastructure. We provide extensive REST APIs so you can access data programmatically.	Yes can easily access your database directly.
