

Managing Programs is very easy on Kendis compared to Jira and Confluence

Jira is great when working at the team level. But when it comes to managing large programs, program increments, teams, and managing dependencies in Jira you can feel very limited. Using Confluence with Jira often helps but it requires a lot of manual work and is highly time consuming. Kendis equips you with the capabilities to smoothly manage your Program Increment on top of Jira without any administrative effort.

Challenges when Managing your Programs in JIRA

How Kendis Removes these Challenges

Ability to manage dependencies visually

Create multiple dependencies and assign each with a unique status and link type

Lack of ability to manage the cross teams features

Swim lanes allow easy management of features that have been assigned to the teams

Transparent tracking and progress updates, especially for scope changes

Analytics and Reports keep track of all the activities in runtime

Not designed to provide birds overview for your program increment

Select from three viewing modes that show the current state of your Program

Lacks real-time capabilities to manage

PI planning with remote team members

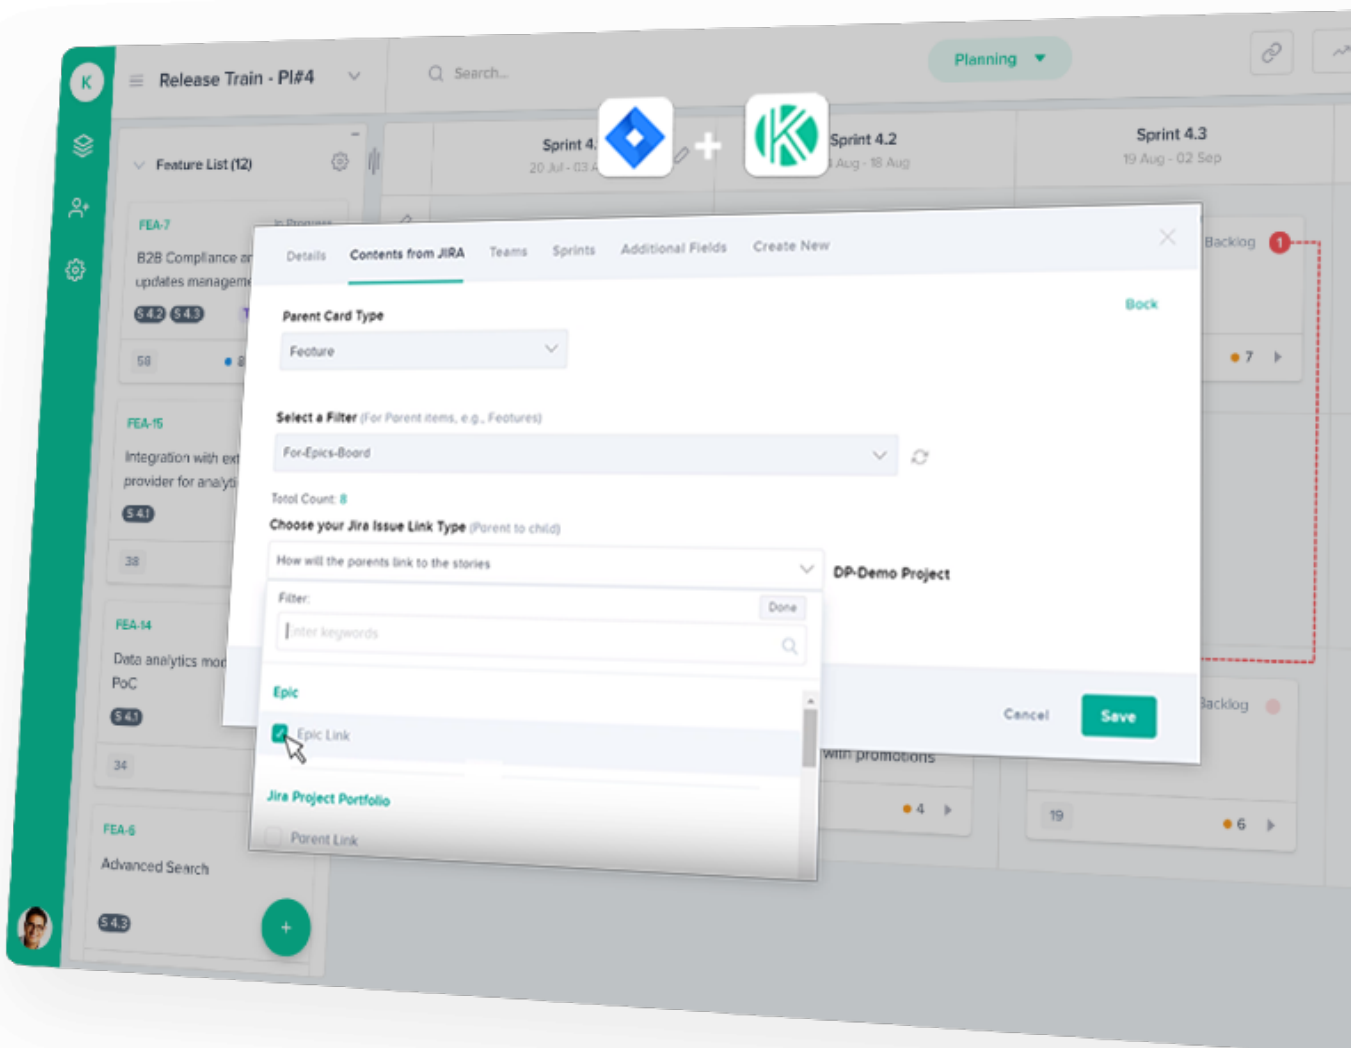

Board in just a glance.

No automated way to plan and track objectives

Transparently plan your PI with remote teams in runtime with brilliant visualization, transparency and live updates.

Create objectives which can have a business value and link these objectives to the items on your Program Board

Features that make managing your PI effortless...

Customizable Program Boards

Using the highly flexible and customizable boards in Kendis, rid yourself of all the complexities and freely map all of your work items from any of your integrated ALM tool on to the Kendis Program Board to plan your PI's.

Real-Time 2 way Sync with Jira

Connect Jira and sync your entire work items on to Kendis within a matter of seconds through the Kendis Plugin or the seamless API integration between Kendis and Jira.

Daily and Weekly Scope Change Reports

The Reports feature in Kendis summarizes all the activities done in a session into a tabulated form. These reports are able to display data from multiple boards and allow you to pick and choose data from a variety of filters.

Pre and Post PI Planning

In Kendis, you can save the “planning” state of your PI which will help keep a reference of your progress as you execute your PI. With a single click, you can always go back in time to see what originally happened in the previous state.
