See how Kendis works

Program Increment Planning with Remote Teams

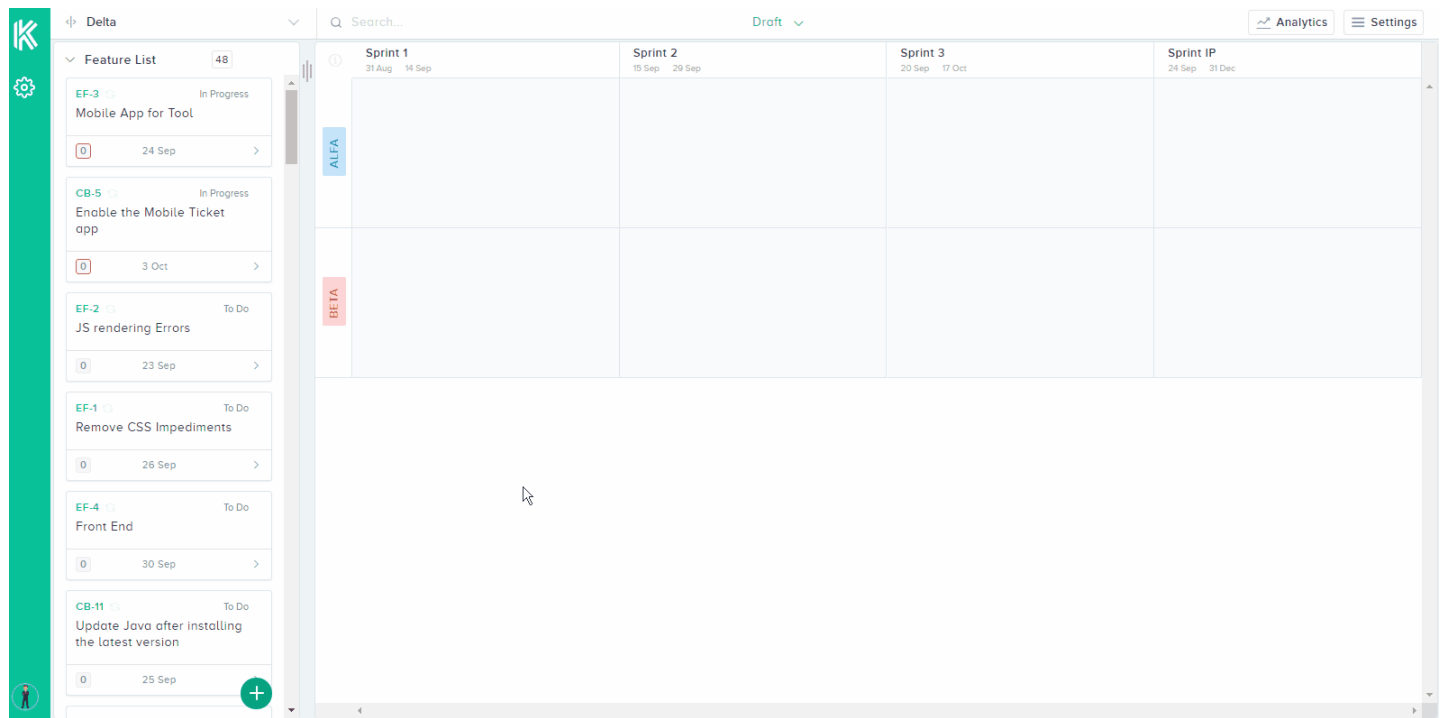

Kendis is a solution which enables the teams to plan and coordinate from multiple locations, multiple platforms and from multiple time zones. The boards in Kendis are highly flexible and offer perfect visualization for your Digital Program Board. Engaging all teams and planning your features, stories and sprints is extremely straightforward and painless.

2-way sync with Jira and Azure Boards

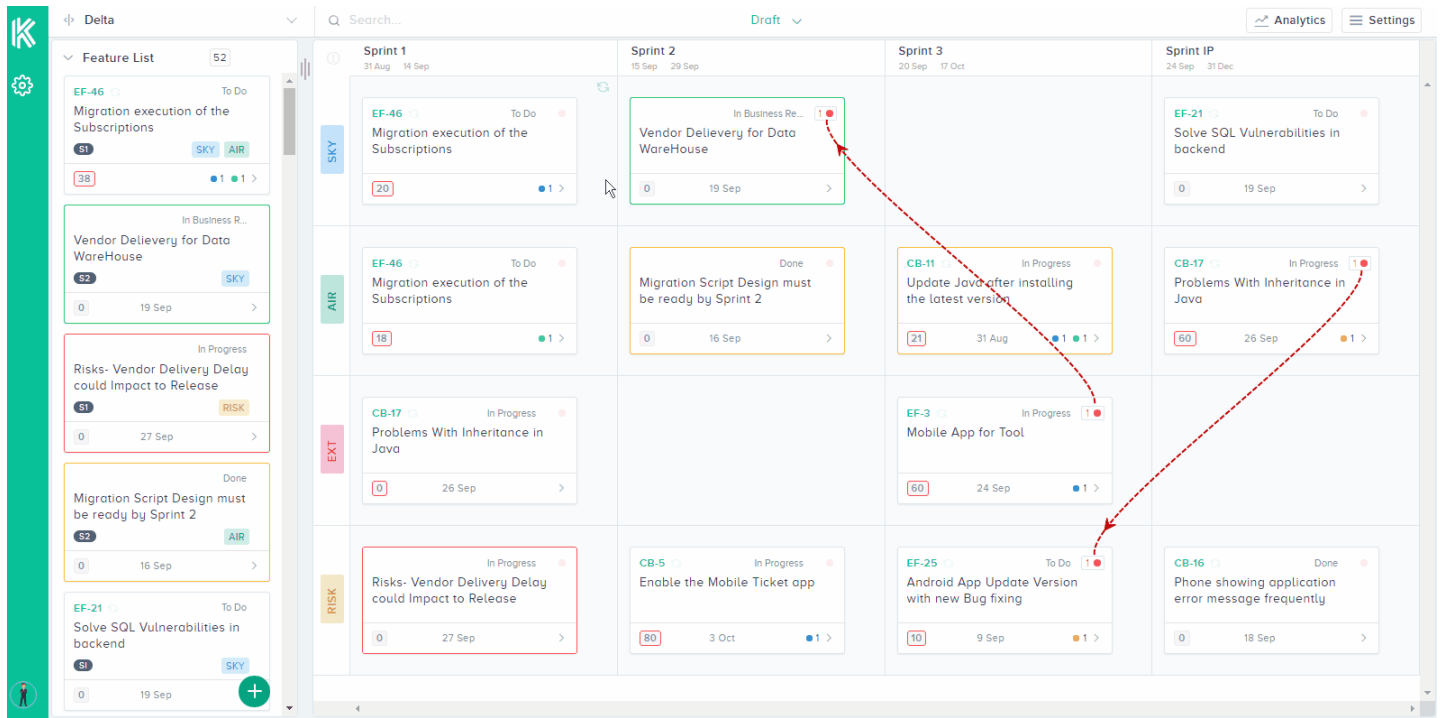

Say goodbye to all the boring and manual work to keep your ALM tool

and PI Boards in sync. Kendis offers real-time two-way sync with Jira and Microsoft Azure Boards that helps save the valuable time of RTEs, scrum masters and team members.

Capture Dependencies

Create, plan and track cross team dependencies that can also be synced to your ALM tool. You also have the option of viewing teams or sprint wise for better visibility.

PI Objectives Tracking

Create Objectives for program and teams. Set the business value and directly link them to features and stories. During PI execution get the real-time updates on the progress of each objective

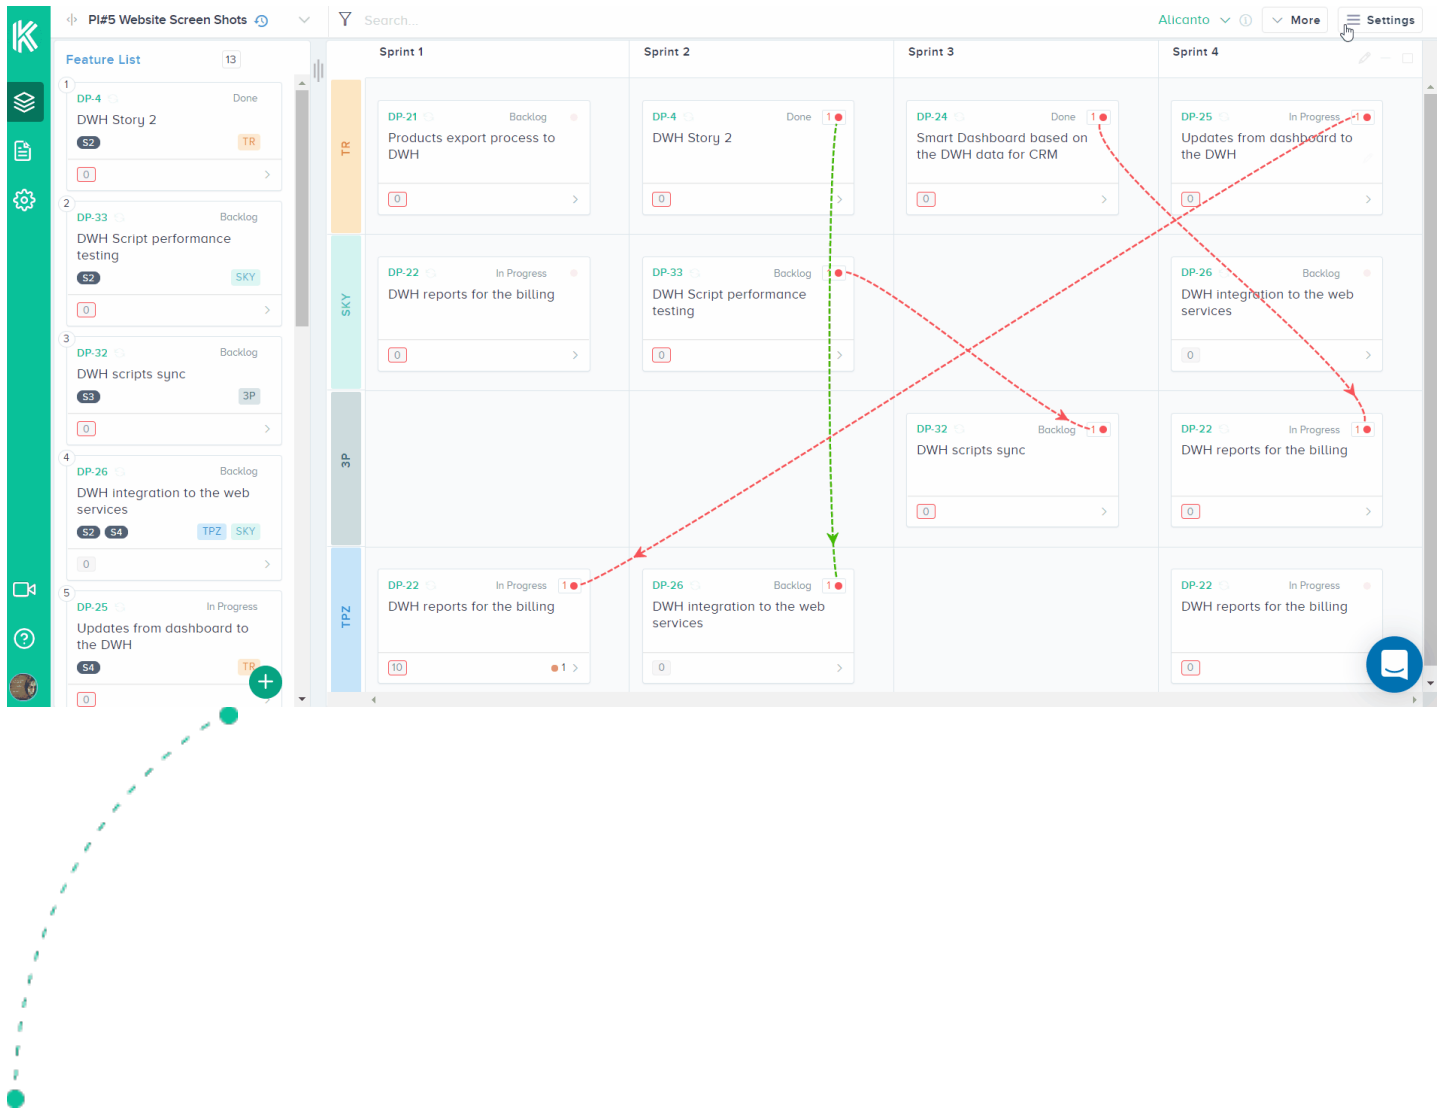

+ Add Team + Add Custom % By Linked Items Status 

PI-4 Objectives 		Completion 33%	BV Achievement 25%			
Objectives 			BV Plan	BV Actual		
>	Roll out the new DWH integrations	 25%	8	4		...
>	Migrate all the older products to the new CRM system	 50%	8			...
Total			16	4		

Team Tiger 		Completion 22%	BV Achievement 0%			
Objectives 			BV Plan	BV Actual		
>	Improve the automation	 22%	5			...
>	Demo Objective with linking	 0%	6			...
Total			11	0		

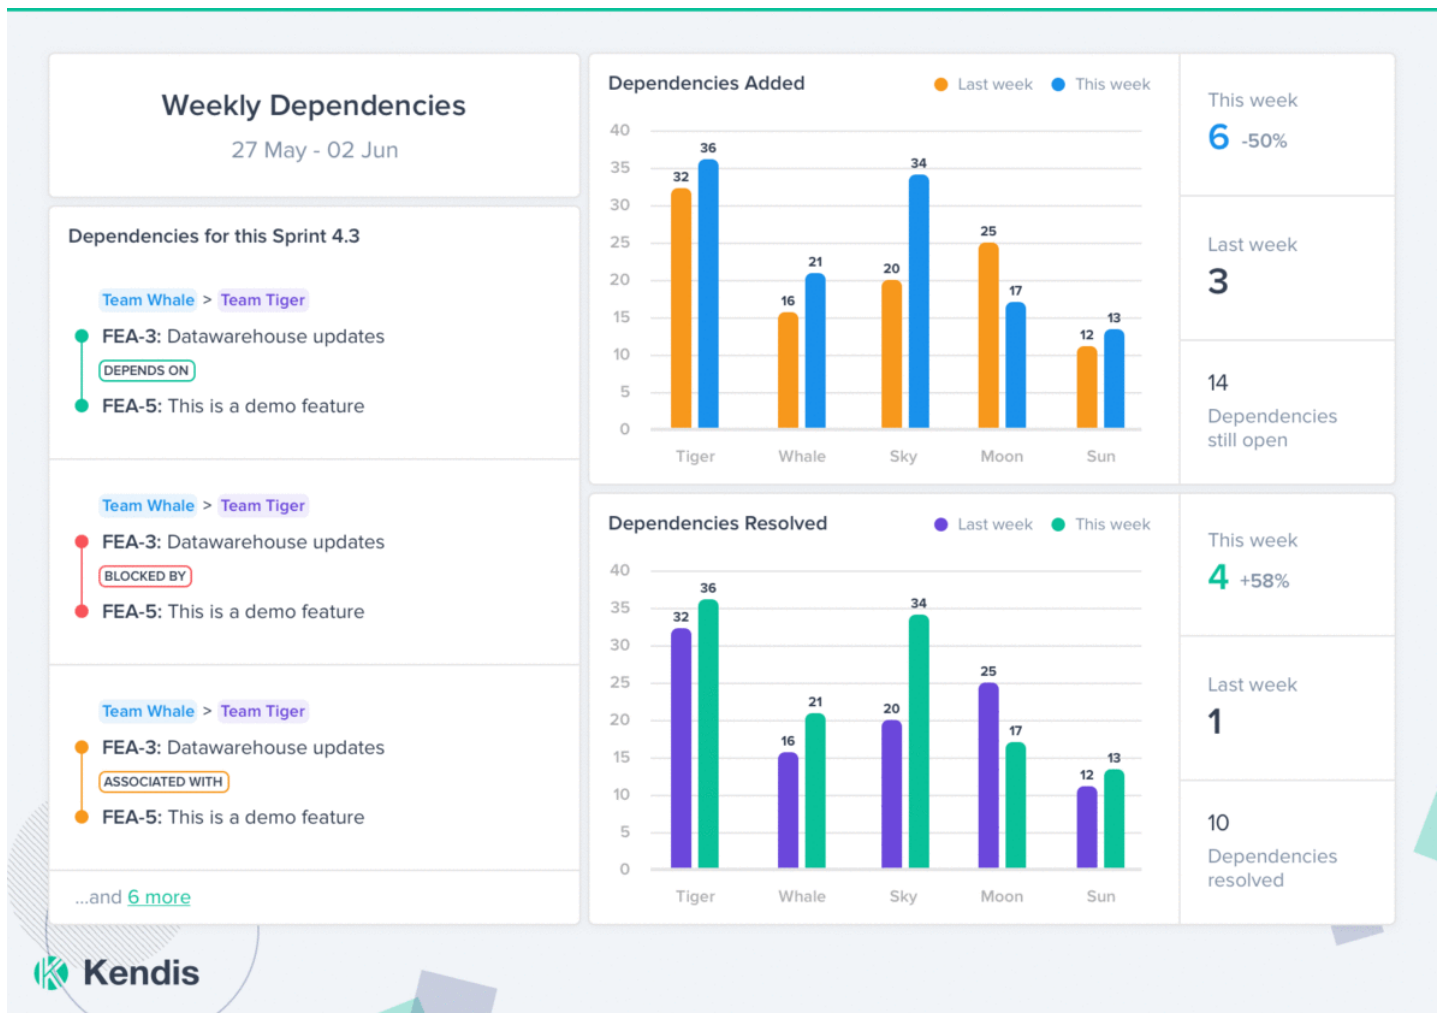

Lock your Board's state

Kendis has a time machine. It really does! Once you are done with your planning, simply change the state of your board to "Tracking". Now you have created a snapshot of your planning activities and while in execution you can easily compare what has changed during execution. With a single click, you can always go back in time to see what was originally planned.

Track your PI

Kendis provides useful analytics during execution that provide valuable insights into which teams are executing according to their original plan. It also shows which features have missed the delivery window and which dependencies are still unresolved.

Outcome of your PI is a Digital Program Board that has

- Features and stories that are synced and updated with your ALM tool
- Correctly mapped dependencies
- Real time Reports of all the events and activities done
- Precisely identified risks

- Useful real time analytics including PI Burndown Chart
- Review of team plans
